Polytechnic University

6 Metrotech Center

Brooklyn, NY 11201

A Quick History Lesson

- October 4 1957: Soviets launched the world's first artificial satellite Sputnik I
- November 3, 1957: Soviets flaunt their power again by launching Sputnik II

Sputnik: Aftermath & U.S. Response

- Shock
- Existential worries
- Confidence crisis
- Hysterical fear of Soviet missiles
- Debate on science-ed
- Missile and recon-sat program
- NASA
- ARPA
- Federal education-aid
- Race to the Moon

Apollo 11 Lunar Module

Astronaut Aldrin & U.S. flag on the Moon

The New Sputniks

- Global problems
 - Terrorism
 - Poverty → civic and social unrest
 - Public health, communicable disease (Avian flu)
 - Global warming → environment
 - Energy crisis
- Outsourcing of American service sector operations
- Increasing import of services and manufactured goods → growing trade deficits
- Perennial disinterest in STEM disciplines among students threatens the American leadership in scientific discovery and technical innovation (Innovation Economy/Knowledge Economy)
- Newspaper editorials, business/government advisory groups, and industry captains point to an urgent need to develop a strong and technologically trained workforce to ensure the American leadership in scientific discovery and technological innovation

The Second Installment of the ITEA/Gallup Poll and What It Reveals as to How Americans Think About Technology

A Report of the Second Survey Conducted by the
Gallup Organization for the International
Technology Education Association

Today's Students

- Lack interest in science and math due to:
 - Uninspiring lab experiments
 - Lack of connection to real life applications
- Attracted to new gadgets
 - iPod
 - Video games
 - Cell phones

Science and Mechatronics Aided Research for Teachers (SMART): A Research Experience for Teachers Program

- Introduce multidisciplinary field of mechatronics to teachers:

Training: Anshuman presenting the automated conductivity experiment to teachers.

Mentoring: Ilya helps SMART weather balloon team test their experiment.

Research: Ed and Dvora work on a hands-on structured project.

- PI, over a dozen Poly students, and 38 NYC metropolitan area teachers since 2003 participated in this project.
- The teachers are being empowered to reinforce STEM training and educational experience of a diverse student body from New York metropolitan area.
- Teachers
 - conduct field trips for students to mechatronics lab;
 - raise funds to integrate mechatronics activities;
 - use mechatronics demos in their classes and labs;
 - develop new robotics curriculum;
 - initiate after school science and robotics research clubs;
 - disseminate their RET Site experience

- 4-week RET workshop
- First 2-weeks: teachers learn about sensors, actuators, electro-mechanical components, and microcontrollers
- Last 2-weeks: teachers develop mechatronics-aided science projects to experience the design, model, analyze, refine, prototype, and validate cycle arising in real-world mechatronics system development.
- Teachers integrate project-based learning:

Science-Oriented Kids from Across The U.S. Gather at Polytech Conference

Gathering Held in NYC for First Time; Students Housed at Maricott

By **Rosanne Gilmore**, Science Desk Chair

When the conference line, from around the world, began to arrive in New York City, the line was long. The line was long because the conference was held in New York City, the only city in the world that has a high school district that is a member of the International Science and Technology Association (ISTA). The conference was held in New York City, the only city in the world that has a high school district that is a member of the International Science and Technology Association (ISTA). The conference was held in New York City, the only city in the world that has a high school district that is a member of the International Science and Technology Association (ISTA).

Young Robots Run. A P&H student in mechatronics engineering at Polytechnic University, left, demonstrates the "Young Engineers" kit to a group of students at the Polytech Conference in Manhattan. The student is wearing a white shirt and glasses. The students are looking at a small robot on the table.

The line was long because the conference was held in New York City, the only city in the world that has a high school district that is a member of the International Science and Technology Association (ISTA). The conference was held in New York City, the only city in the world that has a high school district that is a member of the International Science and Technology Association (ISTA).

Introduction in Engineering teacher Robert Casullo demonstrates a mechatronics device operating in mechatronics, and he and another teacher had as part of a summer research program.

Control Systems

Science and Mechatronics-Aided Research for Teachers

The "SMART" program provides teachers with training and workshops

"Smart" Teachers

Mr. Richard Balsamel of Science High School, Newark, N.J., raised over US\$4,000 from his school district for mechatronics kits and supplies and began a mechatronics research club. In addition, he is introducing mechatronics in his physics classes by integrating four simple activities for students. Mr. David Deusch of Manhattan Center for Science and Math High School, New York, NY, has raised over US\$3,000 from his school and the Children's Aid Society for mechatronics and robotics kits. He is training students in an after-school mechatronics club. Mr. Paul Friedman of Seward Park High School, New York, NY, has raised over US\$1,500 from his school's alumni association for robotics kits. He has partnered with a colleague to train students in an after-school program. Mr. Robert Gandolfo of Plainfield High School, North Massapequa, NY, reported on his SMART experience in his school district newspaper [12]. Mr. William Leacock of W. C. Mepham High School, Bellmore, NY, received a US\$1,500 midget grant from his school district for mechatronics kits. Every other day, through a single class period of AP physics, he teaches a short lesson introducing his students to a hands-on activity planned for a double class period the following day. Mr. Leacock wrote the following to us: "The students are enjoying it so much that, even though I allow them a break in between the double periods, almost all of them stay and work right through the break. It is wonderful to see them learn and enjoy themselves so much." Mr. Michael McDonnell of Midwood High School, Brooklyn, NY, used over US\$5,000 funding from his school to obtain robotics kits and taught robotics to over 200 students in the Fall of 2003 and Spring of 2004 through robotics and advanced robotics courses. Furthermore, with colleagues, he applied for and received a three-year US\$300,000 grant from his school district under the Vocational and Technical Education Act (VATEA). The VATEA grant will enable him to develop and implement a four-year robotics curriculum in his school. Finally, Ms. Marlene McGarry of the Christa McAuliffe School, Brooklyn, NY, raised over US\$1,500 for a project titled "Young Engineers are Made in Brooklyn Through Robotics and Mechatronics," through an online grant agency. From this grant, she obtained wheeled robots and Mars rover kits, and is using them in her seventh-grade classroom. She also wrote an article [13] on her SMART experience.

Robots Are Part of New Instruction at Polytechnic

By **Rosanne Gilmore**

When the conference line, from around the world, began to arrive in New York City, the line was long. The line was long because the conference was held in New York City, the only city in the world that has a high school district that is a member of the International Science and Technology Association (ISTA). The conference was held in New York City, the only city in the world that has a high school district that is a member of the International Science and Technology Association (ISTA).

Teacher Ben Hertz of Middle College High School demonstrates a "P&H" kit that he applied to in Manhattan.

RAISE: A GK-12 Project

- **Academic Partners:** Polytechnic University, HS: George Westinghouse, Marta Valle, Paul Robeson, and Telecommunication Arts & Technology
- **Industry Partners:** Con Edison, Symbol Technologies, FIRST, Honeybee Robotics, American Museum of Natural History
- **People:** 3 Faculty (2 engineering and one education), 13 RAISE fellows, 9 teachers, and ≈400 high school students
- **Courses affected:** Living Environment, Active Physics, Marine Science, Regents Physics, Math A
- **Objectives**
 - Elevating academic achievement in STEM disciplines
 - Entice and prepare an underserved student population for higher education and productive career opportunities in STEM disciplines
 - Provide technology literacy to students and teachers
 - Reinforce science and math skills of students
 - Provide professional development (PD) opportunities for NYC teachers
 - Build lab infrastructure for sensor-based STEM curriculum and instruction
- **Fellows develop sensor-based lab experiments and demos to illustrate scientific phenomena**
- **Lab modules are designed such that every member in a group has an active role in the experiment**
- **Experiments demonstrate connections between real-life applications and high school science**
- **Integration of real-time sensors alleviates the drudgery of manual data collection and allows students to focus on concepts to be learned**
- **Senor-based labs and Vernier's LoggerPro software allow instructors to convey the material through a wide range of learning styles:**
 - Graphical user interface displays sensor measurements through which visual learners easily pick up the concept
 - Team-based tasks require group effort which ultimately benefits auditory/verbal learners
 - Hands-on lab activities aid the tactile/kinesthetic learners

Activities/Events

- **Technical training of RAISE fellows: mechatronics training in partnership with RET, exposure to sensing and data acquisition tools of Vernier Inc., and lab development**
- **4-day long education/pedagogy workshops for RAISE fellows by an education expert: lesson planning, questioning techniques, student behavior, cognition, learning theory and styles, classroom/group management skills, communication skills**
- **Technical workshop for RAISE teachers from partner schools: exposure to sensors and DAQ**
- **Election day (November 2, 2004) PD workshop attended by 20 teachers**
- **RAISE PD day workshop funded by NY Space Grant Consortium attended by 20 teachers**
- **1st Annual RAISE Career Day: April 20, 2005, 100+ attendees: teachers, students, industry professionals**
- **NYC GK-12 Meeting: May 20, 2005, http://gk12.poly.edu/Information/grant_holders_meeting.htm**

Research: Control System Technology

- **Theoretical**

- **Linear systems: multirate control, robust control, stable stabilization, time-delay systems**
- **Nonlinear systems: absolute stability theory, actuator saturation control, adaptive control**

- **Applied**

- **Spacecraft formation control, spacecraft attitude control, cooperative control, UAV path planning**

- **Experimental**

- **Mechatronics: web-enabled control and microcontroller-based low-cost data acquisition and control platform**
- **Pervasive wireless sensor network for homeland security**
- **Noninvasive device for border security to inspect automobile fuel tanks**
- **User friendly, reliable biosensor for cholesterol monitoring**
- **Bio-robotics for reproductive biology**
